NIDO Campo: the builder one-sheet

Pijao, Colombia, August 10: earthquake, then fire. 35 farming families lost their homes. The community is rebuilding with mingas (Saturday work days, with sancocho). Every farm visit, minga and cement delivery is still written on paper and retyped by one volunteer at night. Today we replace the paper. MIT licensed; it belongs to Pijao tonight.

Three tables. Pick one.

Table	Build	Looks good at 3:30 when
The phone 3 to 5 builders	An Android app (Flutter, Kotlin, or a web app that installs from Chrome; your call) that works with no signal: pick a visit type, answer a few Spanish questions, record a voice note, take photos with two consent flags, save; it uploads itself when wifi is back.	Airplane mode on: create a Minga visit with a photo and a voice note. Airplane mode off: it shows up at the inbox table (or the mock).
The inbox 2 to 4 builders	A small server that receives visits and files, and a review page where an organizer sees the visit, plays the voice note, reads the Gemini transcript, and clicks Approve for internal, Approve for public, or Reject.	A visit from the phone table (or from fixtures/) is listed, the transcript shows, and Approve for public is blocked while a photo is flagged "minors".
The board 2 to 3 builders, if hands are left	A one-page public dashboard that reads transparency.json: money raised vs goal, each house and its step, mingas and meals. Spanish with an EN toggle, looks right on a phone.	The real Nido numbers render; approving a minga at the inbox table moves a counter.

Three rules, no exceptions

No GPS, coordinates, addresses or ID numbers anywhere. Location is a vereda picked from a list.

Nothing goes public without a human clicking Approve. A photo flagged "minors present" can never go public.

Use the consented sample photos in fixtures/. Do not put a child in the demo.

The day

Time	What
10:30	Briefing, 3 minutes. Pick a table. Clone the repo. Read the README out loud at your table (5 minutes, worth it).
12:45 and 14:30	The host comes by: "show me something running". Anything running counts. After 14:30: stop adding, make what you have show well.
13:00	Lunch. Nobody codes through lunch.
15:30 and 15:45	Repo link on the wall sheet, then show and tell: three minutes per table, from your own device.

Cheat sheet: what the pieces say to each other

A visit (one JSON per visit, the phone makes the id)

```
{ "schema": "campo/1", "id": "<uuid-v4>", "project": "nido-pijao", "visit_type": "minga",
  "started_at": "2026-10-31T09:12:00-05:00", "author": "Gustavo",
  "municipio": "Pijao", "vereda": "La Maizena", "site_ref": "golondrinas",
  "consent": { "given_by": "familia", "scope": "internal" },
  "answers": { "attendees_count": 14, "meals": 18, "meal_funder": "sancocho-club" },
  "notes": "", "media": [ { "id": "m1", "kind": "photo", "file": "<id>/01.jpg",
      "sha256": "...",
                          "people_identifiable": false, "minors_present": false } ] }
```

Phone to inbox

Call	Means
PUT /api/campo/visits/{id}	Here is a visit. Sending it twice is fine; same id, same answer.
PUT /api/campo/visits/{id}/media/{media_id}	Here is one file. Sending it twice is fine; same sha256, same answer.
GET /api/campo/visits/{id}	What do you have? The phone marks the visit synced when every file is confirmed.
Header	Authorization: Bearer nido-pijao:<invite code from the README>

Inbox to board (written when someone clicks Approve)

```
{ "id": "evt_...", "at": "2026-10-31", "type": "minga", "site": "sendero-arenales",
  "attendees": 14, "meals": 18, "meal_funder": "sancocho-club",
      "source": "campo:<visit id>" }
```

Visit types the phone shows (all defined in config/nido-pijao/project-config.json)

Type	In one line	Do first?
Minga o convite	A work day: who came (a number), what got done, how many plates of sancocho	Yes
Visita técnica de obra	A house check: which step, how far, what is missing, a photo of the signed sheet	Yes
Censo, agro, entrega, taller	First family visit (counts, never names or IDs), farm visit, delivery with receipt photo, group workshop. Same engine, more config	If time
Nota libre	Voice, photo, text, no form	Cheap, do it

Gemini (inbox table, free tier key from Google AI Studio): voice note in, Spanish transcript out; transcript in, suggested answers out (structured output, fill only empty fields); photo in, caption ES and EN plus the two flags out. A "minors" guess can only lock public, never unlock it.
