ALIANZA NIDO LANE · HOST GUIDE

How to host the Nido lane (without being the tech person)

Your job is not to make technical decisions. Those are already made and live in the repo. Your job is to tell the story, keep people fed and unblocked, call the time, and make sure the day ends with a show and tell and a photo. That is it.

Before Saturday (three things)

1. **Find one "repo buddy".** An AIC volunteer with tech skills who clones the repo on Thursday and runs the quick start once. On Saturday they are the person builders ask "where is the sample data". Ask AJ for a name.
2. **Send builders the one-sheet.** Post the builder one-sheet and the repo link on the Luma page or the event WhatsApp on Thursday, with: "Bring a laptop and, if you have one, an Android phone and a charger."
3. **Print 8 copies of the builder one-sheet** and 3 of this guide. Bring a marker and painter's tape for the sign-up sheet.

The day, in six moments

When	What you do	What you say (roughly)
10:30	Lane briefing. Stand up with the flow picture from the one-sheet. Three minutes, not more.	"Here is Pijao, here is what a visit looks like today, here is what we want to see at 3:45. Three tables: the phone, the inbox, the board. Pick the one that sounds fun."
10:45	Tape the sign-up sheet to the wall. Point builders to the repo buddy. Make sure every table has the repo open and someone who has read the one-sheet out loud.	"Everything you need is in the README. If you are stuck for more than 15 minutes, ask [repo buddy] or shout."
12:45	Walk the tables before lunch. Ask each table the one question. Write the answer on a sticky.	"Show me something running." (Not slides. Anything running counts.)
13:00	Lunch. Remind people to eat. Sit with a table you have not sat with.	"Nobody codes through lunch, the sancocho rule."
14:30	Walk the tables again, same question. Then say the magic sentence.	"One hour left. Stop adding things. Make what you have show well."
15:30	Collect each table's repo link or branch on the sign-up sheet. Line up the show and tell: phone first, inbox second, board third.	"Three minutes each, show, do not tell. Phone table, you are up first."

The only rules you enforce

No GPS, no addresses, no cédulas in anything. If you see a map pin or a street address on a screen, say "take it out".

Nothing goes public without a human clicking approve. The inbox table owns that button.

No photos of children in the demo data. The repo has consented photos; use those.

Your 90-second pitch

Say it in your own words. This is just the spine.

> "On August 10, an earthquake hit Pijao, in the coffee mountains of Colombia. The next day fires took the homes of 35 farming families. Our friends there are rebuilding house by house with mingas: Saturday work days where the whole vereda shows up and someone cooks sancocho."
>
> "Every visit to a farm, every minga, every delivery of cement is written on paper and WhatsApp and retyped by one volunteer at night. Donors see numbers that are a week old."
>
> "Today we build the phone app that replaces the paper (it works with no signal), the inbox where an organizer approves what goes public, and, if we have hands left, the board that shows donors where every peso went."
>
> "Three tables. Pick one. At 3:45 we want to see one visit go from a phone in airplane mode to the inbox to the board. Everything we make belongs to Pijao tonight."

When someone is stuck

- **"The other table is not ready."** Use the mock. Every table can demo alone against the sample data in fixtures/.
- **"Should we use X or Y?"** Whatever you are fastest in. The README says what the data looks like; the stack is yours.
- **"What would the farmer actually want here?"** The README has a short FAQ from Gustavo. If it is not there, make the simple choice and write the question on a sticky for the wrap-up. Gustavo answers WhatsApp between [time] and [time] Pacific.
- **"We cannot install Android Studio."** Build it as a web app that installs from the browser. The README says how. Nobody loses points for that.
- **"We will not finish."** Right. Nobody finishes a hackathon. Show the part that works.

Show and tell and wrap-up (15:45 to 16:30)

1. Each table, three minutes, from their own laptop or phone. You hold the clock and clap at the end.
2. Ask every table one closing question: "What should the next person build first?" Write it down.
3. Group photo with the flow picture. Thank the sponsors and the repo buddy by name.
4. Collect: repo links, names of anyone who wants to keep going, the sticky notes. Send them to Gustavo the same evening.
5. What happens next, in one sentence: "AHO! and Espejo de Agua take this to Pijao in November and test it on a real minga. You will hear how it went."

Bring: this guide, 8 printed one-sheets, tape, marker, stickies, a phone charger, your own Android phone if you have one. The repo buddy brings the laptop with the repo already running.
